Q1 Inventory Product Search System

10 marks

A supermarket stores product names in different letter cases. Develop a program that:

- Converts product names to lowercase using toLowerCase()
- Searches a product using contains()
- Confirms exact matching using equalsIgnoreCase()

Your Code

```
1 import java.util.Scanner;
2
3 public class InventoryProductSearch {
4     public static void main(String[] args) {
5         Scanner sc = new Scanner(System.in);
6
7         String[] products = {"Laptop", "MOUSE", "keyboard", "MoNiToR",
8
9         System.out.println("Enter product name to search: ");
10        String searchProduct = sc.nextLine();
11
12        String searchLower = searchProduct.toLowerCase();
13
14        boolean found = false;
```

Input

mouse

Output

Enter product name to search:
--- Search Results ---
Match found (contains): MOUSE
Exact match confirmed for: mouse

Q2 Bank Token Queue Management System

10 marks

A bank serves customers based on token order. Using Queue:

Add customer tokens using offer()

Serve the next customer using poll()

Display the upcoming customer using peek()

Your Code

```
1 import java.util.LinkedList;
2 import java.util.Queue;
3
4 public class BankTokenQueue {
5     public static void main(String[] args) {
6         Queue<Integer> tokenQueue = new LinkedList<>();
7
8         tokenQueue.offer(101);
9         tokenQueue.offer(102);
10        tokenQueue.offer(103);
11        tokenQueue.offer(104);
12
13        System.out.println("Current Queue: " + tokenQueue);
14    }
15 }
```

Input
stdin input

Output

```
Current Queue: [101, 102, 103, 104]
Next customer to be served
(peek): 101
Serving customer (poll): 101
Updated queue: [102, 103, 104]
```

Q3 Restaurant Digital Order Analyzer10 marks

A restaurant stores orders as DOSA-3-IDLY-2-VADA-1. Create a program that:

- Splits the order using split()
- Converts food names to uppercase using toUpperCase()
- Counts the number of ordered items using length()

Your Code

```
1 public class RestaurantOrderAnalyzer {
2     public static void main(String[] args) {
3         String order = "DOSA-3-IDLY-2-VADA-1";
4
5         String[] parts = order.split("-");
6
7         int itemCount = 0;
8
9         System.out.println("Order Details:");
10        for (int i = 0; i < parts.length; i += 2) {
11            String foodName = parts[i].toUpperCase();
12            String quantity = parts[i + 1];
13
14            System.out.println("Item: " + foodName + " | Quantity: " +
```

Input

stdin input

Output

```
Order Details:
Item: DOSA | Quantity: 3
Item: IDLY | Quantity: 2
Item: VADA | Quantity: 1
Total number of ordered items: 3
```
